

The logo for Asset RS is displayed in white text on a red rectangular background. The word "Asset" is in a serif font with a registered trademark symbol (®) to its right. The word "RS" is in a larger, bold serif font. A white arrow points upwards from the top of the letter 't' in "Asset".

Give Your Crop A Strong Early Season Advantage

Asset RS is a growth-boosting formulation that is designed to mix easily with your starter fertilizer to provide agronomic benefits that can improve your crop returns. This can result in even more agronomic benefits from the unique fertilizer additive that's been proven effective on many crops.

The stronger root development you can get from Asset RS can give your crop a strong, early-season advantage. By helping plants get firmly established, your crop can more efficiently utilize available nutrients and moisture. That can help it through mid-season stresses and pay off at harvest with higher yield and quality potential.

- *Stronger, healthier root system*
- *More efficient use of nutrients and moisture*
- *Less lodging from stronger stalks*
- *Less vulnerability to weather extremes*
- *Higher yield potential*
- *Easy to use*

GUARANTEED ANALYSIS

ACTIVE INGREDIENTS:

37.00%Ammonium Carboxylates and polyacrylates
 63.00%INERT INGREDIENTS
 100.00%Total

NOT A PLANT FOOD INGREDIENTS. This product is not a fertilizer

Crops, Rates & Application:

USE RECOMMENDATIONS: ASSET® RS is compatible with most liquid fertilizer/herbicide spray mixes at manufacturers specified label rates. However, it is recommended that a "jar test" be performed prior to the actual application. In the event of fertilizer/herbicide compatibility problems, the addition of a stabilizing/compatibility agents are recommended. Best results are obtained when ASSET RS is incorporated or injected in a zone or band in the soil with the fertilizer component at a minimum depth of two (2) to four (4) inches. The recommendations for the use of this product are based upon the best current information available.

DOSAGE RECOMMENDATIONS: To determine the proper amount of ASSET RS to add to the fertilizer, multiply the recommended dosage rates below by the number of acres one ton of fertilizer will cover. Row or Band and Injection Applications: Use ASSET RS at the rate of five (5) to six (6) ounces per acre. Broadcast Applications: Use ASSET RS at the rate of ten (10) to eleven (11) ounces per acre.

DRY GRANULAR FERTILIZER: ASSET RS may be impregnated on most nitrogen fertilizers or dry fertilizer blends that are composed of at least 50% of a combination of urea, nitrate or ammonium phosphate. Uniform application in the field is necessary to ensure optimum results. Use and Dosage Recommendations: To ensure uniform coverage of the fertilizer during the ASSET RS impregnation process, use a closed rotary drum mixer equipped with suitable internal spraying equipment, OR uniformly apply the ASSET RS (see dosage recommendations above) with water to produce an adequate amount of solution to uniformly treat/impregnate the dry granular fertilizer.

MIXING WITH ANHYDROUS AMMONIA: ASSET RS is readily soluble in liquid anhydrous ammonia. Carefully meter ASSET RS into the anhydrous ammonia nurse tank or applicator tank by pumping it through an accurate, calibrated metering device into the liquid ammonia, either after filling or as the tank is being filled. Use a positive flow system or check valves, where appropriate, to prevent one product from entering the delivery tank of the other. Introducing both products simultaneously into the nurse tank or applicator tank automatically provides the mixing required for a uniform, homogeneous solution. Meter 0.45 gallons (3.6 pints, or 4.2 lbs.) of ASSET RS into each ton of liquid ammonia. (This is equivalent to 3.2 quarts of ASSET RS per 3589 lbs. of anhydrous ammonia, or 80 lbs. of ASSET RS per 34,000 lbs. of ammonia.) When used with anhydrous ammonia add ASSET RS at 0.034 ounces per pound of nitrogen applied.
