

# HEL-FIRE®

## ***Herbicide Activator***

### ***For Faster, More Complete Weed Control***

New Hel-Fire from Helena is a unique herbicide activator that utilizes a three-way blend of ingredients to improve results from your weed control application.

In one product, Hel-Fire increases weed absorption of active ingredient, improves spray deposition and prevents antagonisms caused by poor water quality. Hel-Fire is particularly effective with glyphosate-based applications. If other herbicides are in the tank mix, Hel-Fire helps prevent antagonism problems which can affect performance.

Plus, Hel-Fire enhances performance in cool weather, as well as hot & dry conditions!

- ***Increases ai absorption***
- ***Improves deposition***
- ***Good wetting properties***
- ***Corrects hard water antagonisms***
- ***Improves rainfastness***
- ***Less run-off from higher spray volumes***
- ***Good performance in weather extremes***
- ***Easy dispersion in water***
- ***Easier tank cleanout from oil-free formulation***
